SUMMARY

Full-stack developer with 2 years of experience building and running production business systems with C#/.NET, React and SQL Server: omnichannel inventory, an HR portal, ERP integrations, e-commerce and WhatsApp. I have been the sole developer on end-to-end projects, from data analysis and architecture to deployment and incident response. I make decisions by measuring real data and documenting them.

EXPERIENCE

Inducascos — Medellín, Colombia

Development Assistant (Full-Stack) — May 2025 – Present
Full-Stack Developer Apprentice — Nov 2024 – May 2025

- **Unified omnichannel inventory** (.NET 8, React 19, SQL Server, PWA): as the sole developer, designed a tablet app that unifies the catalog of two ERP companies by EAN barcode (99.98% match rate) and shows live stock per store. Modular monolith with 8 ADRs and architecture tests; one search went from 942 to 155 results.
- **HR self-service portal** (React, .NET 8, SQL Server, Azure): sole developer for the first year; in production 5 weeks after the first commit and now serving two companies. Microsoft Entra ID sign-in, Azure Blob Storage files, PDF/Excel reports and a rule-based org chart with cycle validation.
- **WhatsApp platform** (ASP.NET Core, SignalR, Redis, WhatsApp Cloud API): lead full-stack developer (the whole console and ~80% of the backend). Site-access chatbot built as a state machine with 7 safety requirement profiles, a real-time agent console and a notification queue with retries, backoff and idempotency across 4 company numbers.
- **VTEX IO e-commerce + ERP middleware** (Node.js, TypeScript, Azure App Service, Docker): built cash-on-delivery payment and an automatic job that reprocesses stuck orders (locks, circuit breaker, feature flags) for a channel of ~1,450 orders a month; diagnosed and fixed production incidents.
- **AI ↔ CRM/ERP integration API** (.NET 8, EF Core, T-SQL): built 4 of the 5 endpoints a WhatsApp AI agent uses to check stock and invoices and to create warranty cases with attachments in a single transaction, with fuzzy matching of the reported defect.
- **Design voting module** (ASP.NET WebForms, SQL Server): redesigned the data model and migrated 2,218 historical votes from Excel with 0 differences. Added SSO with Microsoft Entra ID (OpenID Connect + PKCE) and linked 339 accounts.
- Requirements gathering with business teams, estimation and backlog in Azure DevOps, and automation of administrative tasks with Power Automate Desktop.

PERSONAL PROJECT

Finance APP — 2026 – in progress

Personal finance app: ASP.NET Core 8 and PostgreSQL API with 19 REST endpoints, JWT authentication with rotating refresh tokens and a CSV/Excel statement importer with duplicate detection.

EDUCATION

Systems Engineering — In progress · 8th semester
Instituto Tecnológico Metropolitano (ITM), Medellín

Technologist in Software Development — 2022 – 2025
Instituto Tecnológico Metropolitano (ITM), Medellín

TECHNICAL SKILLS

Backend: C#, .NET 8, ASP.NET Core, Entity Framework Core, Dapper, SignalR, Node.js, Express, NestJS, REST APIs
Frontend: React, TypeScript, JavaScript, Vite, TanStack Query, Tailwind CSS, HTML, CSS, VTEX IO
Data: SQL Server (T-SQL, stored procedures), PostgreSQL, Redis
Cloud & DevOps: Azure (App Service, Blob Storage, Key Vault, Entra ID), Docker, IIS, Azure DevOps, Git
Practices: Modular architecture, ADRs, testing (xUnit, Vitest), ERP integration, AI-assisted development

LANGUAGES

Spanish: native · English: intermediate (reading, writing, conversation) · German: basic
